Immediate release

San José, Costa Rica, February 14, 2023 — At Web Summit Qatar, Square Codex, a leading global provider of software engineering talent, is delighted to unveil the launch and integration of advanced Artificial Intelligence (AI) technology into its flagship software engineering staff augmentation service, slated for Q2 2024.

This integration marks a significant step forward in enhancing the hiring process for clients seeking software engineers. By leveraging AI technology, Square Codex aims to deliver a more personalized, engaging, and efficient experience. This advancement will enable better alignment of job requirements with high-quality software engineering talent. Moreover, it will empower software engineers to secure job opportunities that closely match their career aspirations.

"We're really excited to talk about the future of nearshoring outsourcing software engineering staff augmentation services at this year's Web Summit," says Alejandro Azuola, Co-Founder, and CEO of Square Codex. "We look forward to engaging with investors, attendees, and media professionals to share our journey and our unique contributions to the industry."

About Square Codex:
